4th Halifax International Epilepsy Conference & Retreat

September 21 to 24, 2016
White Point Beach, Nova Scotia, Canada

Epilepsy as a Network Disorder

The need for the “Bigger Picture” to redefine current disorder concepts

Join us for 2 ½ days of fresh, conceptual thinking!

The specific aim of this meeting is to increase our understanding of neurological and psychiatric disease, and epilepsy specifically, by broadening our perspectives to gain a better understanding of shared mechanisms in epilepsy versus autism, depression, anxiety, dementia and psychosis.

Faculty & Program

Join world experts in the fields of brain disorders to hear clinical and scientific presentations and to participate in questions, clinical talks, discussions, networking, brainstorming and friendship.

The anticipated outcome is a published review of the current conceptual framework for the role of network pathology in epilepsy as compared to other neurological and psychiatric diseases. Our ultimate goal is to create a learning environment, and to establish a collaborative network among international experts focusing on this topic.

Evdokia Anagnostou – Canada	André Fenton – USA	Astrid Nehlig –USA
Chrisophe Bernard – France	Hans Foerstl – Germany	Jorge Palop – USA
Ingmar Blümcke – Germany	Alon Friedman – Canada	Bernd Pohlmann-Eden – Canada
Carol & Peter Camfield – Canada	Peter Giacobbe – Canada	Asuri N. Prasad – Canada
